## Solutions

1. **Solution:** Equating corresponding elements:  $2x + y = 5$  and  $x - 2y = 0$ . From the second equation,  $x = 2y$ . Substituting into the first:  $2(2y) + y = 5 \Rightarrow 5y = 5 \Rightarrow y = 1$ . Thus,  $x = 2(1) = 2$ . **Answer:**  $x = 2, y = 1$ .
2. **Solution:**  $A^T = \begin{bmatrix} \cos \alpha & \sin \alpha \\ -\sin \alpha & \cos \alpha \end{bmatrix}$ . Calculating  $A^T A$ :  
$$\begin{bmatrix} \cos^2 \alpha + \sin^2 \alpha & -\cos \alpha \sin \alpha + \sin \alpha \cos \alpha \\ -\sin \alpha \cos \alpha + \cos \alpha \sin \alpha & \sin^2 \alpha + \cos^2 \alpha \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} = I.$$
3. **Solution:** Let  $P = A + A^T$ .  $P^T = (A + A^T)^T = A^T + (A^T)^T = A^T + A = P$ . Since  $P^T = P$ , it is symmetric. Let  $Q = A - A^T$ .  $Q^T = (A - A^T)^T = A^T - A = -(A - A^T) = -Q$ . Since  $Q^T = -Q$ , it is skew-symmetric.
4. **Solution:**  $3X = 5B - 2A = 5 \begin{bmatrix} 0 & 1 \\ -1 & 2 \end{bmatrix} - 2 \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix} = \begin{bmatrix} 0 & 5 \\ -5 & 10 \end{bmatrix} - \begin{bmatrix} 2 & 4 \\ 6 & 8 \end{bmatrix} = \begin{bmatrix} -2 & 1 \\ -11 & 2 \end{bmatrix}$ .  
Thus,  $X = \begin{bmatrix} -2/3 & 1/3 \\ -11/3 & 2/3 \end{bmatrix}$ .
5. **Solution:** Perform  $C_3 \rightarrow C_3 + C_2 \Rightarrow \Delta = \begin{vmatrix} 1 & a & a+b+c \\ 1 & b & a+b+c \\ 1 & c & a+b+c \end{vmatrix}$ . Factor out  $(a+b+c)$  from  $C_3$ :  
 $C_3: \Delta = (a+b+c) \begin{vmatrix} 1 & a & 1 \\ 1 & b & 1 \\ 1 & c & 1 \end{vmatrix}$ . Since  $C_1$  and  $C_3$  are identical,  $\Delta = 0$ .
6. **Solution:** Using the property  $|kA| = k^n |A|$  for a matrix of order  $n$ . Here  $n = 3$  and  $k = 2$ .  $|2A| = 2^3 \times |A| = 8 \times 4 = 32$ . **Answer: 32.**
7. **Solution:**  $|A| = (2)(3) - (5)(1) = 6 - 5 = 1$ . The matrix of cofactors is  $\begin{bmatrix} 3 & -1 \\ -5 & 2 \end{bmatrix}$ .  
 $adj(A) = \begin{bmatrix} 3 & -5 \\ -1 & 2 \end{bmatrix}$ .  $A^{-1} = \frac{1}{|A|} adj(A) = \begin{bmatrix} 3 & -5 \\ -1 & 2 \end{bmatrix}$ .
8. **Solution:**  $A = \begin{bmatrix} 2 & 3 \\ 1 & -2 \end{bmatrix}$ ,  $B = \begin{bmatrix} 5 \\ -1 \end{bmatrix}$ .  $|A| = -4 - 3 = -7$ .  
 $A^{-1} = \frac{1}{-7} \begin{bmatrix} -2 & -3 \\ -1 & 2 \end{bmatrix}$ .  $X = A^{-1}B = \frac{1}{-7} \begin{bmatrix} -10 + 3 \\ -5 - 2 \end{bmatrix} = \frac{1}{-7} \begin{bmatrix} -7 \\ -7 \end{bmatrix} = \begin{bmatrix} 1 \\ 1 \end{bmatrix}$ .  
**Answer:**  $x = 1, y = 1$ .
9. **Solution:**  $AB = \begin{bmatrix} 2(0) + (-1)(-1) & 2(4) + (-1)(7) \\ 3(0) + 2(-1) & 3(4) + 2(7) \end{bmatrix} = \begin{bmatrix} 1 & 1 \\ -2 & 26 \end{bmatrix}$ .  
 $(AB)^T = \begin{bmatrix} 1 & -2 \\ 1 & 26 \end{bmatrix}$ .
10. **Solution:**  $A^T = -A$ . Taking determinants:  $|A^T| = |-A|$ . Since order is 3,  $|-A| = (-1)^3 |A| = -|A|$ .  
Since  $|A^T| = |A|$ , we have  $|A| = -|A| \Rightarrow 2|A| = 0 \Rightarrow |A| = 0$ .
11. **Solution:** Expanding along  $R_1$ :  $|A| = 1(1-3) - 0(2-0) + (-1)(2-0) = 1(-2) - 0 - 2 = -4$ .  
**Answer: -4.**

12. **Solution:**  $A(\text{adj}A) = |A|I$ . Taking determinants:  $|A(\text{adj}A)| = ||A|I|$ .  
 $|A||\text{adj}A| = |A|^n|I| \Rightarrow |A||\text{adj}A| = |A|^n$ . Dividing by  $|A|$  (as  $A$  is non-singular):  $|\text{adj}A| = |A|^{n-1}$ .

13. **Solution:**  $\text{Area} = \frac{1}{2} \begin{vmatrix} 1 & 3 & 1 \\ 0 & 0 & 1 \\ k & 0 & 1 \end{vmatrix} = 3$ . Expanding along  $R_2$ :  $\frac{1}{2}|(-1)(0 - 3k)| = 3$ .

$$\frac{1}{2}|3k| = 3 \Rightarrow |k| = 2 \Rightarrow k = \pm 2. \text{ Answer: } k = 2 \text{ or } -2.$$

14. **Solution:**  $A^2 = \begin{bmatrix} 3 & 1 \\ -1 & 2 \end{bmatrix} \begin{bmatrix} 3 & 1 \\ -1 & 2 \end{bmatrix} = \begin{bmatrix} 8 & 5 \\ -5 & 3 \end{bmatrix}$ .

$$A^2 - 5A + 7I = \begin{bmatrix} 8 & 5 \\ -5 & 3 \end{bmatrix} - \begin{bmatrix} 15 & 5 \\ -5 & 10 \end{bmatrix} + \begin{bmatrix} 7 & 0 \\ 0 & 7 \end{bmatrix} = \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix} = O.$$

15. **Solution:**  $A^T = \begin{bmatrix} 1 & 6 \\ 5 & 7 \end{bmatrix}$ . Symmetric  $P = \frac{1}{2}(A + A^T) = \begin{bmatrix} 1 & 5.5 \\ 5.5 & 7 \end{bmatrix}$ .

$$\text{Skew-symmetric } Q = \frac{1}{2}(A - A^T) = \begin{bmatrix} 0 & -0.5 \\ 0.5 & 0 \end{bmatrix}. A = P + Q.$$

16. **Solution:**  $|A| = 4 - 3 = 1$ .  $A^{-1} = \begin{bmatrix} 2 & -3 \\ -1 & 2 \end{bmatrix}$ .

$$X = A^{-1}B = \begin{bmatrix} 2 & -3 \\ -1 & 2 \end{bmatrix} \begin{bmatrix} 4 \\ 3 \end{bmatrix} = \begin{bmatrix} 8 - 9 \\ -4 + 6 \end{bmatrix} = \begin{bmatrix} -1 \\ 2 \end{bmatrix}. \text{ Answer: } x = -1, y = 2.$$

17. **Solution:**  $|A| = ad - bc$ .  $\text{adj}(A) = \begin{bmatrix} d & -b \\ -c & a \end{bmatrix}$ .

$$A^{-1} = \frac{1}{ad-bc} \begin{bmatrix} d & -b \\ -c & a \end{bmatrix}.$$

18. **Solution:**  $(AB)(B^{-1}A^{-1}) = A(BB^{-1})A^{-1} = A(I)A^{-1} = AA^{-1} = I$ .

Since the product of  $(AB)$  and  $(B^{-1}A^{-1})$  is  $I$ ,  $(AB)^{-1} = B^{-1}A^{-1}$ .

19. **Solution:** Writing in  $AX = B$  form, the coefficient matrix  $|A| = 9$ .

Using Cramer's rule or  $X = A^{-1}B$  yields  $x = 1, y = 2, z = 3$ . **Answer:**  $x = 1, y = 2, z = 3$ .

20. **Solution:**  $a_{21}$  is 4. Minor  $M_{21} = \begin{vmatrix} 2 & 3 \\ 8 & 9 \end{vmatrix} = 18 - 24 = -6$ .

Cofactor  $C_{21} = (-1)^{2+1}M_{21} = -1(-6) = 6$ . **Answer: Minor = -6, Cofactor = 6.**
