

CUET (UG) – MATHEMATICS

Chapter Test - Linear Programming

General Instructions

1. Total Questions: **20**
2. Duration: **60 Minutes**
3. All questions are compulsory.
4. Each question carries **5 marks**.
5. For each correct answer: **+5 marks**.
6. For each incorrect answer: **-1 mark**.
7. No negative marking for unanswered questions.
8. Use of calculator or electronic devices is strictly prohibited.
9. Choose the most appropriate answer from the given options.

1. In a Linear Programming Problem (LPP), the objective function $Z = ax + by$ is a:
 - (A) Quadratic function to be optimized
 - (B) Linear function to be optimized
 - (C) Constraint to be satisfied
 - (D) Discrete function
2. The common region determined by all the constraints including non-negative constraints $x, y \geq 0$ of an LPP is called:
 - (A) Infeasible region
 - (B) Unbounded region
 - (C) Feasible region
 - (D) Optimal region
3. If the feasible region of an LPP is bounded, then the maximum or minimum value of the objective function occurs at:
 - (A) The origin only
 - (B) Any point inside the region
 - (C) At least one corner point (vertex) of the region
 - (D) The center of the region
4. Which of the following is not a constraint of an LPP?
 - (A) $x + y \leq 5$
 - (B) $Z = 3x + 4y$
 - (C) $x \geq 0$
 - (D) $2x - 3y \geq 10$
5. The feasible region for an LPP is shown in a graph. Let $Z = 3x - 4y$ be the objective function. If the vertices of the region are $(0, 0)$, $(5, 0)$, $(4, 10)$, and $(0, 8)$, the minimum value of Z occurs at:
 - (A) $(0, 0)$
 - (B) $(0, 8)$
 - (C) $(5, 0)$
 - (D) $(4, 10)$
6. If the objective function $Z = ax + by$ has the same maximum value on two corner points of the feasible region, then the number of points at which maximum Z occurs is:
 - (A) Exactly 2
 - (B) Only 1
 - (C) Infinite
 - (D) Finite
7. In an LPP, the constraints $x \leq 4, y \leq 3, x \geq 0, y \geq 0$ define a feasible region that is:
 - (A) A triangle
 - (B) A rectangle
 - (C) An unbounded region
 - (D) A square
8. Objective function $Z = x + y$, subject to $x + y \leq 1, x \geq 0, y \geq 0$. The maximum value of Z is:
 - (A) 0
 - (B) 1
 - (C) 2
 - (D) Infinite

9. If the constraints in an LPP are $x + 2y \leq 10$, $3x + y \leq 15$, $x \geq 0$, $y \geq 0$, one of the corner points of the feasible region is:
- (A) (5, 0)
 - (B) (0, 15)
 - (C) (10, 0)
 - (D) (4, 3)
10. A linear programming problem is called infeasible if:
- (A) The region is unbounded
 - (B) There is no common region satisfying all constraints
 - (C) The objective function is negative
 - (D) The origin is not included
11. Maximise $Z = 4x + y$ subject to $x + y \leq 50$, $3x + y \leq 90$, $x \geq 0$, $y \geq 0$. The maximum value is:
- (A) 120
 - (B) 90
 - (C) 200
 - (D) 100
12. Which of the following statements is true for a Linear Programming Problem?
- (A) Every LPP has a unique optimal solution
 - (B) If an LPP has two optimal solutions, it has infinitely many solutions
 - (C) The feasible region must always include the origin
 - (D) The objective function must be maximized only
13. The point which provides the optimal value for $Z = 5x + 10y$ subject to $x + 2y \leq 120$, $x + y \geq 60$, $x - 2y \geq 0$, $x, y \geq 0$ is:
- (A) (60, 0)
 - (B) (40, 20)
 - (C) (120, 0)
 - (D) (80, 40)
14. For the constraints $x + y \leq 4$, $3x + 3y \geq 18$, $x, y \geq 0$, the feasible region is:
- (A) A small triangle
 - (B) An unbounded quadrilateral
 - (C) Empty (Infeasible)
 - (D) A line segment
15. The corner points of a feasible region are (0, 0), (2, 0), (1, 2), (0, 1). The maximum value of $Z = x + y$ is:
- (A) 2
 - (B) 3
 - (C) 1
 - (D) 0
16. In an LPP, if the objective function is $Z = 2x + 5y$ and the feasible region is bounded by (0, 2), (0, 5), (4, 1), (5, 0), the minimum value of Z occurs at:
- (A) (5, 0)
 - (B) (4, 1)
 - (C) (0, 2)
 - (D) (0, 5)
17. A linear programming problem is used to maximize $Z = 3x + 2y$ subject to $x \geq 2$, $y \geq 3$. The feasible region is:

- (A) Bounded
 - (B) Infeasible
 - (C) Unbounded
 - (D) A single point
18. The set of all feasible solutions to an LPP is a:
- (A) Concave set
 - (B) Convex set
 - (C) Empty set only
 - (D) Circular set
19. Corner points of the feasible region for $Z = 3x + 9y$ are $(0, 10)$, $(5, 5)$, $(15, 15)$, $(0, 20)$. The minimum value of Z is:
- (A) 60
 - (B) 90
 - (C) 180
 - (D) 75
20. The optimal value of the objective function is attained at the points:
- (A) On the x-axis
 - (B) On the y-axis
 - (C) At the corner points of the feasible region
 - (D) On the line $x = y$

MASTER MATH FASTER & SMARTER!

Your Ultimate Digital Math Companion for Every Exam & Every Dream

✓ CBSE • ICSE • ISC • JEE • SAT • CAT • CTET • CUET & More!

Why Choose MathStudy.in?

Latest Pattern E-Books

Complete Chapter PDFs

Instant Access,
Anytime

Competitive Edge Gunkes

Case Study Based Learning

Unbelievably
Affordable!

For Students:

Special Features

- ◆ ****Board-Specific**** – CBSE, ICSE, ISC, State Boards
- ◆ ****Exam-Focused**** – JEE, SAT, CAT, CTET, CUET, NTSE
- ◆ ****Grade-Wise**** – Class 6 to 12
- ◆ ****Bilingual Options**** – English & Hindi Medium Support
- ◆ ****Printable & Shareable**** – Use offline, anytime
